

EpiDoc 1: Introduction to Markup

Gabriel Bodard (London)
Charlotte Tupman (Exeter)

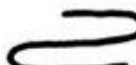

What we'll cover in this session

1. Introduction to Markup
2. Introduction to EpiDoc
3. Hands-on demonstration of Oxygen XML Editor
4. Abbreviations
5. Complex Lacunae

1. Introduction to markup

[illegible]

| | | |
|---|--|---|
|  | Delete: take out something here. | car r mufflers should sh ould |
|  | Insert: add something here. | You ^{are} afraid o ^f mice. |
|  | Add space here. | Juggl ^{ers} buy a lot of eggs. |
|  | No space: close the gap. | some body |
|  | Delete and close the gap. | the giraffe |
|  | New paragraph here. | "Yes," said Jack. "All right," said Jill. |
|  | No paragraph: keep sentences together. | The meeting was brief. It lasted twenty minutes. |
|  | Transpose: switch these things. | friends both were |
|  | Change or insert this letter. | I like success |
|  | Make this a capital letter. | old dr. smith |
|  | Make this a small letter. | My Uncle lost a shovel. |
|  | Spell it out. | His 2 friends are Fido & Spot. |

What is markup?

- **Markup** is information embedded in a file that tells you something *about* the other things that exist in that file
- Everything in the file that is not markup is **content**

Renditional vs semantic

- Renditional markup captures appearance:
 - `<i>`mens sana in corpore sano`</i>`
 - `<i>`The Roman Stonecutter`</i>`
 - This could `<i>`just`</i>` belong to...
- Semantic markup captures meanings:
 - `<foreign>`mens sana in corpore sano`</foreign>`
 - `<title>`The Roman Stonecutter`</title>`
 - This could `<emph>`just`</emph>` belong to...

Advantages of semantic markup

- Captures semantic distinctions (not appearance)
- (designed for) Electronic publishing
- Single input, multiple outputs
- Interchange and Re-usability
- Sustainability
- Modeling and computability
- Community of peers
- Generalized tools

Basic XML syntax: an element

opening tag closing tag

↓ ↓

<date>2nd March 1827**</date>**

 ↑

 content

An element with an attribute

opening tag

↓

<date when="1827-03-02">2nd March 1827</date>

↑ ↑

attribute value

closing tag

↓

An empty element has no content

- It marks the *point* at which something occurs in the text

`<pb/>`

author

article title

Berman, Merrick. "Boundaries or Networks in Historical GIS: Concepts of Measuring Space and Administrative Geography in Chinese History." *Historical Geography* 33 (2005): 118-133.

journal title

pages

year

volume

```
<bibl>
<author>
<surname>Berman</surname>
<forename>Merrick</forename>
</author>
<title level="a">Boundaries or Networks in Historical GIS:
Concepts of Measuring Space and Administrative Geography
in Chinese History</title>
<title level="j">Historical Geography</title>
<biblScope type="vol">33</biblScope>
<date>2005</date>
<biblScope type="pp">118-133</biblScope>
</bibl>
```

XML is hierarchical

- Each element is contained by its 'ancestor'
- An element at any level is always contained by an element at the level above, until there is one element containing everything

The Rules of XML

- All open (non-empty) elements must close
- A single 'root' element contains the whole document
- **No overlapping elements!**

`<roleName><persName>King</roleName> Lear</persName>`

`<persName><roleName>King</roleName> Lear</persName>`

- Certain characters in the *content* must be 'escaped' (e.g. <, &) because they form part of basic XML syntax:
 - < becomes **<**
 - > becomes **>**
 - & becomes **&**

2. Introduction to EpiDoc

EAGLE 1999

Silvio Panciera, AIEGL Commission for
Epigraphy and Information Technology:

*È importante che siano utilizzati
programmi che consentano l'esportazione
dei documenti in "Document Type
Definition (DTD) format".*

EpiDoc 2000

Tom Elliott, Hugh Cayless, Amy Hawkins
(University of North Carolina Chapel Hill),
EpiDoc Guidelines, version 1

- » 2005
- » 2006

The aim of the project is not solely to publish a body of important material, but also to share experience with other scholars and to establish agreed standards. One of the advantages of using XML is that it is possible to develop quite simple tools to extract data from pre-existing databases, and if necessary pass them on to other formats; we are extremely keen to develop the personal contacts which will encourage scholars to work towards technological compatibility.

As part of the Pilot Project we held two very useful » [Workshops](#), in Chapel Hill and in London in February and July 2002; from these we built up an international group of colleagues and collaborators. The new grant will allow us to hold three workshops in each year of the project: we hope to hold one in the UK, one in mainland Europe and one in the USA, each year.

2004

Very appropriately, the first InsAph Workshop was held at New York University in May; this enabled us to discuss plans with the excavators of Aphrodisias, as well as with other U.S. scholars working on similar projects.

- » [New York workshop 18-19 May 2004 programme](#)

In September, on the occasion of the XIIe Rencontre Epigraphique, bringing together Italian, French and British scholars, we took the opportunity to hold our second workshop, bringing together a group of scholars from Italy engaged in related undertakings. This was made possible by the generous hospitality of the British School at Rome.

- » [Rome workshop 15-16 September 2004 programme](#)

2005

The third workshop of our first year took place in Oxford, in January, jointly organised with the » [Centre for the Study of Ancient Documents](#) and the » [Lexicon of Greek Personal Names](#). The meeting focussed on issues of identifying, classifying and marking up names in both corpora and analytical projects.

- » [Oxford workshop 10-11 January 2005 programme](#)

On 17-18 September 2005 we met in Berlin, in collaboration with the Berlin-Brandenburg Academy, on the occasion of a Corpus Inscriptionum Latinarum workshop on CIL III.

- » [Berlin workshop 17-18 September 2005 programme](#)

Papyri.info has two primary components. The **Papyrological Navigator** (PN) supports searching, browsing, and aggregation of ancient papyrological documents and related materials; the **Papyrological Editor** (PE) enables multi-author, version controlled, peer reviewed scholarly curation of papyrological texts, translations, commentary, scholarly metadata, institutional catalog records, bibliography, and images.

Papyri.info aggregates material from the Advanced Papyrological Information System (APIS), [Duke Databank of Documentary Papyri](#) (DDbDP), [Heidelberger Gesamtverzeichnis der griechischen Papyrusurkunden Ägyptens](#) (HGV), [Bibliographie Papyrologique](#) (BP), and depends on close collaboration with [Trismegistos](#), for rigorous maintenance of relationship mapping and unique identifiers. Work is in progress to incorporate content from the [Arabic Papyrological Database](#) (APD) as well. ...read [more](#).

Description

[\[edit\]](#)

This page collects projects, tools, and other resources relating to the **EpiDoc** community, guidelines, schema, stylesheets, and other resources for XML encoding of epigraphic and papyrological texts. The majority of these are projects adopting the EpiDoc/TEI standards.

Pages in category "EpiDoc"

The following 87 pages are in this category, out of 87 total.

A

- A Collection of Greek Ritual Norms Project (CGRN)
- A Nastro Inscriptions from Roman Catacombs
- Advanced Papyrological Information System (APIS)
- Ancient Inscriptions App
- Aphrodisias in Late Antiquity 2004
- Apparatus Inscriptions (Agostinelli)
- Archimedes Palimpsest

B

- Bulletin of Online Emendations to Papyri

C

- Chapel Hill Electronic Text Converter (CHETC)
- Coptic SCRIPTORIUM
- Corpus of Ancient Label Inscriptions
- Corpus of Aramaic Inscriptions
- Corpus of Campa Inscriptions
- Corpus of Ptolemaic Inscriptions
- Corpus of Pyu Inscriptions
- Corpus of South Arabian Inscriptions
- Curse Tablets from Roman Britain

D

- Datenbank zur jüdischen Grabsteinepigraphik
- Deutsche Inschriften Online
- Digital Archive for the Study of pre-Islamic Arabian Inscriptions

E cont.

- EnCoWS
- EpiDoc
- EpiDoc Front-End Services
- EpiDoc Workshops
- Epigraphic Corpus of Georgia
- Epigraphic Database Bari
- Epigraphica Dionysiaca
- Epigraphie en reseau (Lamé)
- Epigraphische Datenbank Heidelberg
- Epigraphische Datenbank zum antiken Kleinasien
- Epigraphy.info

H

- Heidelberger Gesamtverzeichnis der griechischen Papyrusurkunden Ägyptens
- Hydralc administration

I

- I.Sicily
- Inscriptiones antiquae Orae Septentrionalis Ponti Euxini (IOSPE)
- Inscriptiones Graecae et Latinae Bruttiorum (BILG)
- Inscriptiones Graecae in Bulgaria Repertae
- Inscriptiones Graecae in Croatia Repertae
- Inscriptions of Aphrodisias
- Inscriptions of Greek Cyrenaica
- Inscriptions of Israel Palestine
- Inscriptions of Libya

L cont.

- Latium Vetus
- Leiden-plus
- Leipzig Open Fragmentary Texts Series (LOFTS)

M

- Magica Levantina
- Markup list
- Monumenta Asiae Minoris Antiqua XI

O

- Ogham in 3D
- Online Corpus of the Inscriptions of Ancient North Arabia
- Open Greek and Latin project

P

- Pandektis
- Papyri.info
- Papyrological Navigator
- Parma Digital Medical Library
- Perseus Digital Library
- PETRAE

R

- Roman Inscriptions of Britain
- Romans 1 by 1
- Romanesque Manuscripts

<https://wiki.digitalclassicist.org/Category:EpiDoc>

Prior art

- EpiDoc recommended use of TEI
 - SGML/XML for literary/linguistic corpora since 1988
- Based on Leiden distinctions (1931)
 - Krummrey-Panciera 1980/Panciera 1991
- EAGLE / PETRAE database fields
- Expanded for neighbouring disciplines
 - Papyri and other text-bearing objects (seals, coins...)
 - Other scripts (Cuneiform, Arabic, Hebrew, Mayan, Sanskrit...)

Text Encoding Initiative (TEI)

- An XML language designed for the encoding of literary and historical texts, used and supported by a large community of humanities researchers
- Epidoc is a “customization” of TEI, therefore is able to participate in and benefit from the larger community

<http://www.tei-c.org/Guidelines/P5/>

How projects use TEI

- A TEI schema can be modified according to the needs of different projects
- You can choose the elements, attributes and values that are relevant for your materials
- TEI is not a 'one size fits all' approach: it is flexible whilst at the same time providing interoperability

EpiDoc – *Epi(graphic)+Doc(uments)*

- Adapting TEI to the needs of a research community
- TEI for ancient documents
- Active development community
- Guidelines + Schema
- Transformation and publication tools
 - Reference Stylesheets
 - EFES

Leiden is also a markup language

| | |
|----------------|--|
| ... | Illegible letters, not restored by editor. |
| ab | Letters ambiguous without their context. |
| [...] | Letters missing, not restored by editor. |
| [abc] | Letters missing, restored by editor. |
| ⟨...⟩ | Letters erroneously omitted, not restored. |
| ⟨abc⟩ | Letters erroneously omitted, restored by editor. |
| a(bc) | Abbreviation expanded by editor. |
| {abc} | Letters considered superfluous by editor. |
| [[abc]] | Deletion which can be restored. |

See also <https://en.wikipedia.org/wiki/Leiden_Conventions>

3. Oxygen XML Editor

An XML editor...

- Is an application specifically designed to work with XML files
- Checks **well-formedness** (i.e. whether or not a file conforms to the rules of XML)
- Checks **validity** against a schema (to ensure consistency)
- Formats to display clearly the overall structure of the file

Oxygen XML Editor

- Download here: <https://www.oxygenxml.com/download.html>
- You will only need to download Oxygen XML Editor (you can ignore Author, Developer etc.)
- Oxygen offers a free 30-day trial licence
- Other XML editors are available

Demo

Download template XML file here:

<http://www.stoa.org/epidoc/gl/latest/supp-structure.html>
